

Plexuspharmaco Portal: Master Audit of Errors & Mistakes

Target URL: <https://plexuspharmaco-eu.vercel.app/>

Scope: Structural, Performance, UI/UX, and Content Consistency Review

1. Content & SEO Copywriting Mistakes

Redundant Placeholder Copy: Multiple header dropdown sections repeat the exact same boilerplate text: *"Explore our comprehensive offerings and commitment to advancing global healthcare through innovation and quality."*

Fix: Replace duplicates with unique, keyword-optimized descriptions tailored to each individual category page (e.g., Investor Relations, R&D Pipeline).

2. Interface & Layout Shift (CLS) Mistakes

Dynamic Mega-Menu Expansion: Header sub-menus expand inline on hover/click, altering document height dynamically.

Fix: Use absolute positioning or fixed-height containers for dropdown wrappers to prevent content reflow and layout jumps.

Third-Party Widget Injection (Google Translate): External translation script injects DOM elements dynamically during initial render.

Fix: Wrap the translation widget inside a fixed-dimension container to reserve layout space beforehand.

3. Mobile Usability & Accessibility Mistakes

Compact Touch Targets: Secondary navigation links and footer items feature tight padding layouts.

Fix: Ensure a minimum touch target area of 48px height and width for all interactive mobile elements.

4. DOM Cleanliness & Code Maintenance

Empty Hidden Elements: Source code contains several redundant empty wrapper tags (e.g., `<div hidden></div>`, `<div></div>`).

Fix: Clean up unused component wrappers to improve code maintainability and DOM rendering efficiency.
