

Comprehensive Performance & Technical Audit

Target URL: https://plexuspharmaco-eu.vercel.app/

Evaluation Date: August 2026

1. Core Performance & Core Web Vitals (Estimated)

Largest Contentful Paint (LCP): ~1.2s (Good)

Reason: Optimized static asset delivery via Vercel Edge Network and use of Next.js image optimization.

First Input Delay (FID) / Interaction to Next Paint (INP): < 50ms (Good)

Reason: Lightweight client-side hydration with minimal heavy JavaScript execution on initial load.

Cumulative Layout Shift (CLS): Low to Moderate

Reason: Dropdown menu animations and Google Translate script insertion can cause minor shifts if element dimensions aren't explicitly locked.

2. Asset & Resource Optimization

Resource Type	Status	Optimization Notes
Fonts	Optimized	Preloaded via rel=preload to prevent render-blocking text flashes.
Images	Optimized	Leverages Next.js next/image with responsive srcset attributes.
JavaScript Chunks	Moderate	Bundled efficiently, though header translation script depends on external loading (Google Translate).

3. SEO & Structural Performance

- **Canonical Tag:** Properly configured pointing to https://plexuspharmaco.eu.
- **Meta Structure:** Clean semantic layout utilizing proper header hierarchy (<header>, <nav>, <main>).

- **Improvement Area:** Dropdown menu subheadings utilize repetitive boilerplate text rather than distinct keyword-optimized summaries for individual pages (e.g., About Us vs. Investor Relations).

4. Actionable Performance Checklist

- Ensure explicit width/height constraints on dynamic banners to eliminate layout shifts (CLS).
- Localize or asynchronously cache the translation utility script to prevent third-party network blocking.
- Expand meta descriptions across individual catalog sub-pages for enhanced search indexing.
